DETAILED ACTION

Allowable Subject Matter

1. Claim 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance.

Rank et al. disclose the construction of an electric motor including a stator and a rotor which defines a rotor axis and includes at least a stack of laminations layered by sheets and provided with slots for receiving rotor windings, wherein at an end face of the at least one stack of laminations, there is provided at least one rotor end sheet which is made of high-strength fine-grain structural steel.

Kahle, Sr. teach the construction of a sew through exciter armature with integral banding rings having a rotor end sheet abutting laterally in a radial direction the stack of laminations, wherein the rotor end sheet has a flat thin configuration for the purpose of accomplishing the axial containment of the rotor.

Martini et al. teaches an electric motor, wherein the slots for receiving the rotor windings, are closed, or at least some of the slots have leakage orifices for the purpose of finding a method, which will adapt the projection welding process to the manufacture of a stack of laminations with inclined slots.

The prior art of record, taken alone or in combination, fails to teach the construction of an electric motor as described on independent claims 1 and 6, wherein the rotor end sheet has a flat thin configuration, and matches, at least in proximity of the rotor axis, a geometric shape of the sheets layered in the stack of laminations.

Dependent claims 2-5 and 7-11 are considered allowable by their respective dependence on allowed independent claims 1 and 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
